FOR IMMEDIATE RELEASE

## NEW PRODUCT CATALOG ANNOUNCEMENT

*Santa Ana — August 21, 2001* — Calmont Wire & Cable is proud to announce the availability of its new product catalog. This 50-page catalog offers engineers an indispensable technical reference of Calmont's broad range of precision custom wire and cable. Applications include aerospace, medical, robotics, sensors, military, instrumentation, computer and high-end audio.

This new catalog is subdivided according to construction, complexity and application with particular emphasis to Calmont's highly specialized series of high-flex, high temperature and ultra-miniature cables. Introduced are our new offerings of unique and innovative composite constructions that combine extruded lumens, fibreoptics, tubing, ultralight shielding, etc—all engineered and produced to our customers' exacting specifications.

Calmont Wire and Cable has been designing and manufacturing made-to-order cable since 1958, and provides comprehensive engineering and manufacturing support services from custom designs and prototype development, to trial runs, to full-scale, high-volume production. Calmont prides itself on its ability and willingness to support companies whose minimal run requirements are well below the minimum order thresholds of many other manufacturers.

In addition, Calmont offers contract extruding services and solutions for your innovative engineering and demanding technical problems, even for non-wire or non-cable products.

For more information on how Calmont Wire and Cable can serve your unique requirements, or to request your copy of our new product catalog, please contact us at (714) 549-0336, by fax at (714) 549-4028, or by e-mail at [calsales@calmont.com](mailto:calsales@calmont.com). Our web site is [www.calmont.com](http://www.calmont.com).
